

Solar Flares and Solar Winds

This series was begun in 2012, but we had also touched on the subject in earlier years. Those attunements are included as well, to provide further information and context.

Solar anomalies as portents of time-space shifts

Earth receptors and solar influence

Solar flares and solar winds

Solar tension

All of life is awakening

The life and journey of solar winds

The electrical nature of solar flares

Their turbulent nature

The living Solar System

Sensing the presence of elements of life in motion

The Solar System as a networking system

Understanding transitory life

Solar anomalies as portents of time-space shifts

Mar. 16, 2000 A

JANU: I am Janu speaking, greeting you once more at this opportunity to proceed in a direction of understanding that curtails, so to speak, at least to a degree, the confusion surrounding the anomaly that presents itself as a disturbance in space-time called time shift. What brings this to our attention this afternoon are the coming events prevailing upon humanity you call solar flares and disturbances which ripple throughout your solar system. The solar phase in the time-space continuum is shifting for many have yet to realize that the movement of your environs into new dimensions of experience is a shift in time-space as well. Your solar body exhibits this movement through these eruptions and they will increase in what you call severity and frequency. There will come a time when those so attuned can see what is to come for life in your system through these flares for they are anomalies in the continuum of three dimensional existence for your solar body. These apparent anomalies in the performance of your solar body in their way signal this change to the rest of your system.

And do accept that their influences touch your entire system. Use these opportunities to expand your understanding into other dimensions of life that exist around you and in you.

The solar winds produced by these disturbances are of modified material, altered in such a way as to communicate to the rest of the system that change is coming in the form of alterations in the time-space continuum. So even your worlds in your system are more alerted even as we speak than many in humanity.

Attune then to and experience these openings in this way of understanding and see what they have to offer. We will counsel you as you do this, that you may gain further truths and understanding in embracing and contributing to the success of this movement of life.

Earth receptors and solar influence

Jan. 24, 2003 A

JANU: Janu once more, addressing that needed to bring together the points of interest that develop the understanding of the nature of your world and its progression. These dominant factors shall include solar radiation and subsequent weather patterns, the movement of the collective consciousness of those creatures that live in your seas and oceans and all bodies of water, for they play a role not well understood by humanity, and the energy centers within the Earth and their vibratory changes.

Let us look, then, at the solar influence. There exist in your world receptors tuned to solar influence across the spectrum of solar radiation or emanations. These receptors bring about, or trigger, changing weather patterns, ocean temperatures, as well as the activation of energy centers within the Earth and all creatures, including humanity. These receptors are known points of interest and include mountain peaks, certain vortexes, and those that exist deep within the Earth. There are a few humans so equipped to respond to these emanations in a similar way. They are the anchoring points guided by consciousness of an order different than other locations of these receptors. As for the collective consciousness of the creatures of the water, they will begin to focus more directly now upon being at one with their environment and its vast crystalline quality for receiving, storing, and manipulating energy flows in, around, and through your world. This relationship is little understood by your science and will play a significant role in

preparing your world for a reorganization of its grid structure. These threads of life through your bodies of water will resonate the new solar radiations, reprogramming the world grid system, you see.

The collective consciousness of humanity will begin to rise above pettiness and as one consciousness attune to and communicate with other worlds as an effective representative of the collective life that is your world. It is essential that human consciousness prepare for this. There will be a strong and significant pull from within the True Natures of humanity to awaken to this ability.

So there is much to look forward to, our brother, in preparation for things to come. Be about that which you are and we bid you good day.

Solar Flares and Solar Winds

Sept. 2, 2012

JANU: I am Janu speaking, welcoming then this opportunity to explore and reveal the reality of your sun as it relates to your system of worlds. Let there be known, then, that the solar winds at this time have abated a bit. The communication with your solar system by your sun is paused for a time. This will occur a number of times before major changes.

Your sun is not a body of burning gases isolated from the rest of life. It is governed by, influenced by, a team of so-called specialists who participate in the evolution of solar systems. These specialists are of long standing and great, and their expertise, their influence, is not limited to your sun alone for they have their relationship with other solar bodies as well, especially those forming for the first time. They understand this range of existence very well and would enumerate that your solar body is relatively stable, healthy if you will, but some hiccups, so to speak, are coming.

There will be an increase in activity through solar influence, for Mars in one way and the larger gas worlds in others. The Earth will be relatively unaffected during those changes, but will be influenced at later times in significant ways.

A solar system, our brother, evolves. The evolution of each world is a function of its nature and position. Each has its story and evolutionary path. Some of the changes will be change in density, in the gas worlds, reducing to a degree their physical size. The changes in your sun will be in the form of shifts in the light spectrum, and this occurs in varying degrees throughout its life. As it consumes more of its fuel, other elements will be generated and enhanced and these too modify the make up of the solar winds; therefore altering the influence on the atmospheres and realities of the worlds of your system and their moons.

The extra-terrestrial craft are mindful of this, for it causes them to modify their relationship with the energies of your system for the purpose of propulsion and protection. These changes will, for a time, slightly slim down their rate of travel and absorption of solar energies, and background energies, as well. Your craft for exploration, manned and unmanned, will be influenced as well, especially those that have nuclear fuel.

These changes take long periods of time, compared to your perception of time, and vary greatly in their character and their nature. Yes, understand that these solar winds of communication are more than one-way communication, for in ways not yet understood, the condition and performance of each body, the collective that is your sun on many levels, are attuned to this, to these, and, in a way, are conditioned by their response.

Solar Tension

Oct. 12, 2012 A

JANU: What we have this morning is an examination of the ever changing reality of solar flares and solar winds in your system. These occurrences couldn't be a more natural part of the journey of the Solar Body and its relationship with the solar objects in its vicinity, worlds and the like. We have seen, in other systems, that these occurrences can seem to be both destructive and beneficial, depending upon many conditions. In your system, they are mostly beneficial although not completely. That which nurtures life, from the sun, benefits your world. However, this is true only when the balance of certain realities exist. Witness the life on the rest of the worlds in your system.

Solar prominences are part of the Sun's self-regulatory system, relieving the pressure of titanic forces within the Sun. The solar winds are another matter, our brother, for they project into the entire solar system and are complex, indeed, for they bring sustenance to the planets that do not benefit from the sunlight and warmth, so to speak. Solar winds play a role in stabilizing the position of the worlds, and many other objects, as does solar gravity and other fields. The equilibrium at work here resembles a choreographed ballet of forces.

The solar winds and other radiations add to the mix between many worlds and many realities, energetic in nature, that are not worlds. Life is far more complex and diverse than you realize. Very little truly happens alone, without mutual influence. Everywhere you look, life interacts, whether grossly or subtly. So it is with the stars, our brother, including your own.

Solar radiations monitor the condition of the solar system through what we would call "push back" from the bodies as solar radiations come in contact with not only their surfaces but their fields as well. So there is a tension of sorts, gravitationally, radiationally, solar winds, light, between the sun and the worlds and all the objects in the solar system. This solar tension is part of what holds this system together and serves its longevity. Of course, no force can be uninfluenced by others, so even the human consciousness plays its role. So solar radiation, our brother, truly is communication with the rest of the system, and not just physically.

And, yes, our brother, this interaction will eventually bring another world into your system, to return the balance, the balance that was once here. You think you are so isolated from the rest of the universe. It is not so. The time scale for events makes it seem so. Think larger, our brother, and be aware in a larger way.

All of life is awakening

Nov. 24, 2012

JANU: Solar conditions as such, meaning the life journey of a star or sun, are tied directly to everything in that system of worlds, all of the life and their journeys. The connection between the sun and the worlds and their beings, and yes, even those who travel through the system, is the subject of this morning's journey: "Solar Flares and Solar Winds."

Many consider the Sun's reality—energy, flares, winds, and the like—are caused solely by natural occurrences of the solar furnace. They are not. Every solar activity of a gross nature is guided by ever subtler realities. The same exists for your physical body. The outer activities of the physical body exist as a result of the influences, design, and interactions of the subtler bodies. So it is true with the Sun, our brother, subtler bodies exist which guide the outer activity. This reality exists for all of the worlds and bodies

within the Solar System. The subtler bodies, or realities or energies, interact with each other in the system and in each body, almost instantly by comparison. The solar flares and winds are but a slower example of this influence throughout the system.

As we outlined before, the pushback from all that has been influenced, influences the reality of that being pushed-back against, meaning the Sun. The timing, the magnitude, the direction, the character of solar flares in large measure is a response to these influences, these pushbacks. They are natural interactive occurrences that are continuous.

Humanity has much influence as this on the conditions of the Earth itself, and its subtle bodies, subtle realities. Humanity has some awareness of this concept, mainly the scientific community, with limited understanding. When one learns the magnitude and diversity of these influences, one can anticipate and know the moment-by-moment condition of the bodies involved, by the nature of the changes in their patterns on all levels.

Your solar system is not only going through changes, but has always. Think you not humanity is also going through changes? And many more to come. Learn to read the signs of life and its motions, the currents of life. Think you not, solar winds moving at millions of miles per hour, do not possess energy and influence and change?

Your solar system is a body of life of immense energies, in constant motion, interaction, and change. The same is true for each individual human body, and humanity as a body. Read the signs. This growing ability of perception will serve humanity well in future encounters beyond your solar system. Learn to read life. It is revealing itself to you constantly. Once again, the theme of the awakening of humanity.

Humans perceive that connection and influence must include the travel of long distances, consuming great amounts of time. This is not true for the awakened human. Consider the meaning, in the depth of its fullness, of 'being connected with all of life.' What does this mean? What is the reality and the practicality? In what manner is everything one and connected? Expand your world of knowing, and embrace and learn of life as never before, and your influence, and what influences you, our brother.

Awaken, even as life itself, in every venue is in some form of awakening. Awakening is not just a human experience. All of life is awakening. Namaste.

The life and journey of solar winds

Jan. 7, 2013

JANU: These solar winds involved in much of your Sun's expression of life engagement and influence have eddies and currents stimulated by the solar system bodies that play a major role in the response of those bodies, not just physically, you see, but energetically on numerous levels of reality. As a result, there are spin-offs that leave your solar system and travel great distances--this is one way to detect the presence of another system, when science learns to do this--indicating the presence of solar system bodies. Once observation reveals the relationship of these currents to the position, movement, and energetic reality of the planets and moons, science will be able to trace these back to the nature of the planets and moons, you see, therefore leading to analysis of those of distant systems.

Solar winds carry within them, ultimately, much information. They belong to a group of interplanetary energetic movements to be discovered, for you must understand that a solar system such as yours is very active on many levels, all of which are knowable

and are revealing. Solar winds and their currents are recorded in the history of each world or planet and move within its energetic reality. Archaeologically, this can be a rich source for information. The influence and pattern left of solar winds varies with each event, partly because the sun is evolving, aging, changing, and so are the worlds and the moons. On the periphery of your solar system there are boundary layers of rich energy fields that record these as well. The detection and study of subtle energies will greatly advance scientific understanding and knowledge. Even the age of your solar system can be measured in this way, as well as its general well-being or health, if you wish.

In time, the perception will pass that the space between worlds is a void. It is not. It is filled with life and the interconnection of everything in the system. These finer realities are not limited to your perception of time and space, and depletion through distance. And, in some ways, solar systems are connected through these realities. Let there be, then, a growing understanding of the reality of the solar system and its life.

The electrical nature of solar flares

Feb. 16, 2013

JANU: Solar flares and solar winds are a strong part of solar system communication and influence. There are other influences within your system that have more long-term influence on its functions. But as to the subject of the day, when comparing the two, the flares and the winds, one must see that their movement in this system is somewhat different, but they are no less communication and influence.

The solar flares deposit large amounts of solar material on each part of the solar system. Mercury, you see, has long since been bombarded with this. Every solar flare does not reach it, but the ones that do contribute to its equilibrium of orbital path.

One influence is the electrification of the planet and this is true for other worlds as well. One reality of your solar system is its electrical nature, nurtured by these solar flares. A lot more to your sun, you see, than the burning of hydrogen and the creation of other elements. It is possible to map these electrical influences throughout your system. Much to be revealed in this way. Now, part of this electrification of worlds is not just that of the sun's radiation, but the composition of the world, as well, including its fields. Each world uses its electrification in different ways, unique to each world's life patterns.

Humanity is not immune to this, you see. And, as you know, humanity is partially electrical. Subtle communication between humans, what you call telepathy and others, is nourished by this.

Even on an atomic level, there is influence. One can see from this reality that the manifestation of life is a looping reality of influencing, being influenced, and the constant sharing and updating of the realities of life. Solar flares are a strong part of this in your solar system. One must come to realize that solar influence is more than a one-way delivery of radiation. There is return as well.

The so-called gas giants are more electrical than you might realize, and solar radiation is a large part of this. Jupiter, for instance, has systems that are more receptive to, take fuller advantage of, these electrical discharges than, say, the Earth. More active, you see. When viewed from distance, your solar system is a very active body of life, on so many levels, with its own beauty and vitality.

It is well to explore and understand and experience the oneness connection with more of life than you have imagined. Namaste, our brother.

Their turbulent nature

March 28, 2013

JANU: Now, solar flares and solar winds are of concern with every star system, for this is a prevalent activity throughout most of the universe. These currents of life—and that is what they are—support many dimensional realities of your solar system, for their movements, radiations, and energy are on many levels. And, yes, elements of your radiations, solar winds, leave your solar system and journey into outer space, eventually to combine with that of other systems, you see. Meaning that your solar system is irradiated with that of other systems. This is on a subtle level compared to the gross awareness of most of humanity, but belongs to a system of life that is far more complete and diverse than usually imagined.

Yes, as you intuited a little earlier, turbulence is a major factor in most every part of life, including your solar radiations. You might consider these radiations as straight-line movements from the sun. They are not. They leave your solar body with turbulent reality and, because of this, they are received more efficiently, more effectively by the planets and other bodies in your solar system, for there is a mixing, then, a blending of the energetic realities of those bodies with that of the sun, helping to complete the influence.

Now, understand this, our brother. The elements of radiation from your sun, once departed from the sun, are still connected in other energetic realities, levels, and even at distance they are connected with the sun. Therefore, the sun's awareness or consciousness of their connection with other elements of life is known. The physics that is understood of third dimensional reality, or physical reality, is very limited and is time- and space-based, and not based on realities beyond time and space, although life exists in the midst of this larger truth and is part of it. So the flares and winds of your sun are the physical counterpart of a much more diverse reality and better understood in light of this. Every particle of emanation is connected in this way and on those levels of consciousness, your sun is aware of them and no matter where they are, for that consciousness is not limited by time and space. Also meaning that the influence of these radiations have an instant connection with other venues of life as is your solar system influenced from, what you would say, vast distances.

You exist in a sea of life, constantly in motion, thriving on turbulence and the interplay of many realities. It is true; you are the observer and the observed, at the same time. One asks the question, "What then does the observer that observes you perceive?" It perceives itself, as do you when you observe.

Consider this carefully, gently, and peacefully. Open to the reality of the turbulent nature of life of endless currents and flows, eddies, and creation from these, you see. Consider your own thought patterns and intuitions. Do they not reflect a kind of turbulence, movements and shiftings, resettlings and adjustments for better understanding and finer detail? Even your vascular circulation has turbulence that provides cleansing of the arteries, a more complete mixture of nutrients, life-giving elements not only to the body but to each other. Turbulence is part of the mystery and magic and dynamism of life.

The living solar system

May 8, 2013

JANU: Be aware that these emanations from your sun can, and do, influence the orbits of the worlds. Not so much the distance from the sun but the relative positions in the orbits, relative to each other. Now some might see these as a disturbance, disruptive,

when in fact, our brother, they are in some ways therapeutic to the balances of those bodies, as relate to each other and the sun. For, understand this, that all of these ingredients are part of the health of the solar system, the health in terms of longevity, function, and performance.

These emanations influence the energetic constructs of these worlds whose balance or equilibrium rely upon solar influence to a degree. Remembering that your solar system is an energy system and these are not fixed realities, without flow and motion, interaction, and influence. It is a living system, and living systems have a consciousness, an awareness, a relationship.

You ask then, “What is the mechanism of triggering these emanations, the cause, timing, intensity, endurance?” They are part of the natural order of a solar body, consuming its fuel, surviving its reality, and the collective consciousness of the system. Now realize this, our brother, to a degree there are other influences at work here, some extraterrestrial, some from the Realms, and to a lesser degree human consciousness. Would do well then to attune to the solar consciousness and that collective consciousness of the solar system for a better understanding. Let us move in that direction in our journey on this subject. Living systems exist all over the universe. Difficult for humanity to embrace life in this way, much less embrace each other, with intimacy and understanding and contribution.

Sensing the presence of elements of life in motion

June 29, 2013

JANU: For today’s discussion of solar influences, let there be understood that these influences can be programmed with different functions, purposes, realizing then that life in motion programs itself. Life does not unfold blindly with chaos and haphazard outcome.

We would have you grow in your sensitivity to sensing the presence of life on levels of reality that display its intelligence. Any component of life, including a solar flare or wind, has a presence that responds to other presences, such as worlds and moons and other bodies, not to mention the energetic source of its existence. Sensing the presence of life, or elements of it, goes a long ways towards communicating with life, listening to and understanding its call, its nature, its reality.

For today’s journey, we will focus upon sensing the presence of life near and far. Every time life moves, a ripple is created in the fabric of time/space and subtler realities. As you move your physical body from one place to another, its presence in life shifts and is detectable. Now granted, these are seemingly very subtle realities, but they exist, which facilitates the sensing of life in motion. Now, your sensitivity to any element of life is programmable by you, what you choose to be sensitive to, and, when accomplished, information about that element of life can be known and what awaits it on its journey.

Now, solar flares and solar winds are a byproduct of solar processes that include the consumption of the solar fuel and the intense reactions. Which is again life in motion, creating other elements of life in motion even beyond solar flares and winds, other radiations as well, not to mention the light spectrum, radioactivity. So “Solar Flares and Winds,” our brother, is a tip of the iceberg of understanding them and knowing them and their relationship with the solar system.

The solar system as a networking system

Aug. 19, 2013

JANU: Let us begin then with an announcement that there is forthcoming an explanation into the reactions of the Earth, in climate and weather, to solar influences. Let there be then an understanding that changes in the Earth are connected to, to a degree, the presence of the Sun and the links between the two, the other planets and bodies, and subtle energies emanating from this space that Earth resides in.

Now, let us continue this series examining one of those links, this being the gravitational connection between the Sun and the Earth primarily, and its functions. They are both bathed in each other's gravitational fields, attracted to each other; yet another force propels them away from each other, your science calls centripetal force. The tension between the two bodies, gravitationally speaking, brings about relationship of not just a little stability but life giving exchange, not just of energy but of life patterns as well. What we mean by this is that the patterns of processes in the Sun are rippled through the gravitational link, and others, resulting in pattern shifts in the Earth and, to some degree, from the Earth to the Sun. These many links between solar bodies support the living system, the living solar system, as a viable entity.

Now we speak here of physical forces. There are non-physical relationships as well. This morning's focus of solar flares and winds extends to this understanding. So, to help understand Earth's weather patterns and their changes, look to the Sun for correlations and, when clearly understood, as you predict weather on the Earth with your forecasts, they're not fully understood because pattern changes in the Sun have not yet arrived to modify Earth patterns. However, the Sun does register Earth patterns and to a degree responds to these.

Now, each planet's gravitational reality and patterns of life are connected to each other and the Sun and a network of communication and influence exists throughout the solar system. No world is completely isolated in its orbit. Integrities are maintained by distance and the balance of forces. So, as stated previously, as you gain sensitivity to the presence and the ripples in life through motion, the solar body can be explored, including the Sun, through these links and detectable movements and their currents of life. In this way, you begin to appreciate, through sensitivity, the presence of this solar system as a body of life networking with its elements. Realize this, our brother: there are those who enter this system, explorers, scientists, who have mapped, so to speak, this network of life you call the solar system, and are very adept at reading these so-called signs of the movements of life, and are aware of the properties and well-being of these, as well.

Understanding transitory life

Oct. 10, 2013

JANU: This morning's goal is an appraisal of the Solar Body—by this we mean the entire solar system as an entity—within its domain and its signature as observed by its visitors.

Let us bring into focus, then, an element of this Solar Body reality as to the stability of its integrity. One tends to perceive the Solar Body as an isolated reality, an island in space. A misperception. The integrity of this system is based upon many factors, to include its own natural resources, the fundamental properties of the many forces at play, gravity being only one, the integrity of your galaxy and its countless relationships within its being. So the question this poses: Is integrity constant or is it motion as well?

And, if so, on what foundation does the observer, the explorer, base their findings? They are the findings of the moment, our brother, and the integrity of the moment, and all of life has integrity in the Now.

When examining life and understanding it, the Now point of view is the only constant, for whatever you hope to understand, or observe, or appraise in life, in any timeframe, is changing. So the solar flares and winds of today are not that of tomorrow. They have their life cycle and the Sun will not always produce them, but while it does, one can observe and understand their motion in life and, to a degree, their influence in other solar systems. For their communication with their worlds is not identical to those of this solar system.

So what you explore is an element of life and at some point in its cycle of life, as it is in your own. Yet this still has value in understanding and, yes, serving the evolution of life. So we observe solar flares and winds as the movement of energy, the circulations of energies in a living system called the Solar Body. And no part of the solar system is immune to these. You live and exist in a network of life, with its integrity of the moment and many functions. So the merit of these explorations is to enhance your relationship as you move through life, with the realities that you encounter, and from all of this you gain wisdom in consciousness. And this always adds to the quality and depth of your service.

So, in the context of this understanding, our brother, we continue this series, transitory though they may be, for life is on the move and so are we. Let us understand our motion together and bring where we may.
