

Earth and its Destiny

This series is an off-shoot of the series entitled The Destiny of Humanity, and the first two attunements here are repeated from that former series. In October of 2012, this title and focus was formally begun. Please be sure to investigate The Destiny of Humanity for a fuller understanding of the topic.

The destiny of the Earth and the destiny of humanity are one
The unified destiny of Earth and humanity
The Earth and its destiny
The awakening
Earth and human destiny are one
Taking better care of the Earth
Things to come
Many changes to come
Human destiny, Earth destiny, and reaching for the stars (Service)
A purpose for the Earth and humanity
Step into the future

The destiny of the Earth and the destiny of humanity are one

Sept. 4, 2002 A

JANU: Well-spoken, then, this evening, tributes offered to serve the world. We should exchange this evening those vows needed that serve life through humanity in the area of the benefactor called Earth. For humanity has yet to fully realize that servicing the Earth serves humanity, both directly and indirectly. The destiny of the Earth and the destiny of humanity are one.

What is the Earth, then, that one would serve, but that collective of all life with any association of the Earth. How then does humanity come to terms with understanding the Earth's destiny and that needed to achieve it and how that relates to human destiny? Does humanity even understand its own? There are those that do, but few in number and uncertain as to how to communicate this to others. Let there be then a discussion on this subject to begin with the larger movements of life and the connection to that of the individual, whether it be human or animal or plant, or even, yes, the evolution of the mineral kingdom. Study then the movement of life, the evolutionary experience and the destiny each one points to, for all the kingdoms of life individually at first and then collectively. And in so doing the course is set for understanding life's direction, its potential, and its victories yet to come.

We serve this, this evening, the evolution and destiny of all life of the Earth. Grow in your perception of that which is beyond material aspect of any Earth life. All life has consciousness and energy and multiple realities and connections. There is a grid-like quality that brings mutuality throughout the spectrum of life. This can be seen as one becomes aware of one life touching another, mutually influential. Let there be, then, realized hope and promise for everyone and everything, for all are tied together and one cannot fail alone. To survive life enriches each other. Then, through your connections and, doing so consciously and with conviction, become aware of your life connections, manifesting with greater wisdom, bringing clarity to the destiny of all life. The true power of peace is known as conflict is overcome, replaced with a new way of life. So be it, our brother, and namaste.

The unified destiny of Earth and humanity

Feb. 7, 2006

JANU: Let us begin then this morning by prevailing upon those who are benign in those efforts to bring well-being to human consciousness. Stating quite clearly their effort to begin a dialogue with those who serve the Light of Understanding. We would share at this time the knowledge that bringing to the spring of your time, this year, we shall engage upon the dynamic of Earth Changes of a noticeable nature, both long and short term. Humanity and Earth flowing with life more harmoniously. There will be a conscious dialogue, not in words but in awareness, between humanity and the Earth as living entities, individual and co-existing as one. Let us bring those forces together then that merge these consciousnesses and bring about clarity of unified destiny, even day by day. This proposal reflects sound judgment and reasoning by those who stand for life.

The Earth and its destiny

Oct. 7, 2012

JANU: We are together this morning at a time when it is auspicious for us to begin a series of journeys on the cause of the anomalies that persist in the region of your North Pole. These anomalies consist of deviations in the distribution of mass and the influence this has on Earth's stability, deviations in climate as related to the melting of the polar cap, modifications in Earth's transmission of energy monitored by other worlds and beings, influences of certain patterns, and some that are changing, in the galaxy, on the Earth, and its position in the outer rim. Many dynamic forces at work here. The Earth's alignment with the solar system and other systems as they align with the galactic influences.

Now then, this series will include a look at the potential for adjustment, outcome, and the movement in human consciousness as it partners with the Earth consciousness and life force. Let there be, then, an understanding that this series is born of a desire to appreciate and become one with more universal forces and realities into the nature of life. We will call this series "The Earth and its Destiny."

The Earth's destiny is unfolding and many changes will occur, as they have in the past. But the scope and scale will reach further into a future that is coupled with, to a degree, that of humanity. Humanity has yet to appreciate its role in the destiny of the Earth and of its own species. They are intertwined, but the potential is there to go separate ways. The public at large will come to realize and develop interest in this larger scale, realizing that its own destiny, their own destiny, is described by this. And once again we move from succumbing to change to manifesting it, being masters of your destiny rather than the followers of it.

Humanity has the potential to be a major creative force in the universe, at least in your part of it. There will be a number of thresholds, quantum leaps if you will, in this direction. Several soon to arrive, pushing humanity forward from its lethargy by comparison. Much to explore and grasp and serve.

The awakening

Dec. 2, 2012

JANU: The Earth, then, rich with its history thus far, the tapestry of life, including humanity, must contend with destiny to be filled with opportunities for transformation of all the life that it is, all the creatures, everything. The Earth's destiny will include such as orbital movement, alteration, continuing changes in its energetic and polarity structures. Gravitational anomalies will abound around the world, around the planet. And its signature in space will conform to these modifications. Earth's modifications will influence its neighbors as they near each other on their orbital paths. And there will be a number of large objects nearing the Earth in their movement through space, bringing their changes as well. A very dynamic scenario, you see, much change.

Within the planet, over time, the crust and the mantle will thicken due to lowering temperature, which will render, in some ways, the surface more stable and less tectonic activity. There will be major changes in humanity's care of the world, in a positive direction. The use of energy will become far less destructive.

There will be a technology shift beyond the use of electricity only for power, causing less of a drain on other resources to produce the electricity, you see. Solar energy science will accelerate, with the sun being seen as virtually inexhaustible source. They

will discover how to generate heat directly from subtle energies, through a system of focusing, concentration, not based on larger rays, you see, but compact devices that focus these energies. There are energy sources co-existing with everything that are only hidden by the lack of a coming insight, a simple understanding that defies conventional thinking of energy, you see. It is so close to the surface of consciousness that one would wonder how it was missed.

Growing stations will abound, for a time, for agriculture and fruit production. No longer using vast farms and soil contamination and the poisoning of the Earth with chemicals. Careful consideration will have to take place as to the natural movements of air, and sea, and land, and solar energy that the Earth uses to maintain its viability, and not disturb these, you see, while using them to a degree. Much research needed here.

Far more mass transit, conveyance of people and cargo will take place. Human engineering will make great changes in the functioning of the body, its longevity, its natural defenses, and in time, our brother, life span will double. Of course, culture and society must change as well.

Be aware that the awakening of humanity is also the awakening of the Earth. New understanding, relationships, possibilities, changes. Not a linear process, this will accelerate in years to come, as will the evolution of the Earth. Open the mind, then, to this new life and embrace it.

Earth and human destiny are one

April 3, 2013

JANU: I am Janu speaking, remarking then this morning on the destiny of the Earth, and, of course, that includes humanity as well, for the physical humanity is of the Earth. And the spirit of humanity is of the life that the Earth is of, as well. So, you see, the human journey experience cannot be separate in any way from the Earth and the rest of life, for they are one. Some would say that the Earth is no more than water and rock, and a molten core, and air, and gravity. This is a mind that is uninformed or closed to the nature of life.

The Earth's destiny includes humanity as a species of diverse experience, coupled with the Earth, and, when it moves beyond the confines of the planet, it carries this experience elsewhere in the universe as any culture on Earth, when moving from one region to another, brings its culture experience with it, mingling what it brings with that it finds. So the destiny of the Earth will outlive its physical reality as it moves among the stars by virtue of its population. Understanding the nature of oneness finds it a very real and viable, primary, fundamental reality of life and provides vast opportunity for the collective that is life to evolve, to grow, and become something more. So the destiny of Earth, you see, reaches far beyond its current circumstance.

The Earth has experienced influences from other cultures on other worlds, but not in an open way, to the consciousness of humanity. The influences are there but unseen for what they are, for humanity has known nothing else and therefore sees these influences as their own. Humanity's own existence has been influenced, and modified, and enriched, and continues to be. But the time is coming, our brother, when humanity can no longer ignore the rest of life. It searches longingly for contact, a contact it has already experienced in the early times. So, in that sense, 'first contact' has already occurred, our brother.

Earth will benefit in its destiny from these connections as they occur to a conscious humanity, for it will influence humanity's relationship to the Earth in a more positive way, not to mention first contact to a greater degree with those beings of much wisdom and skill who are not embodied, such as we. So, you see, the awakening of humanity benefits everything and is the path humanity is on. Witness these journeys, our brother. Do they not speak of this?

So the destiny of the Earth is rich indeed, in ways yet imagined by many but anticipated by the Earth itself, for it is more conscious in some ways than humanity. Let there be, then, a resurgence of the discovery of the destiny of the Earth and of humanity and of life of other worlds. Namaste, our brother.

Taking better care of the Earth

May 12, 2013

JANU: The destiny of the Earth is a composite of the destiny of so many realities of the Earth and all of its creatures, including humans, you see. For all together are the Earth's destiny, not separate from one another but included. The Earth's destiny includes its proximity and relationship with the sun and other worlds, for, make no mistake, the Earth's presence in the scheme of things of the solar system plays a role.

As a viable world to support life, it will continue with some changes. These changes include a redistribution of land, water, and resources. The Earth has been a continually changing environment and will continue to be. Deserts and grasslands and oceans will change positions and characteristics, as the Earth recycles itself through many upheavals. These will eventually diminish as the Earth cools.

The most significant concern for humanity is the condition of the atmosphere, for its alteration will allow for solar influences, not to mention that of asteroids, to wreak havoc on the surface of the planet and its many fields of energy, challenging human existence and that of other creatures as well. Humanity must begin to be concerned about their attitude on resources, which has been one of unlimited supply and always present. When humanity lived more naturally, the atmosphere and the Earth were more stable. But can one really say that humanity lives naturally on the world? When at sea in a ship, all must be concerned as to its well-being. The same is true for the Earth, you see, for you do not exist without it.

The recent oil spill in the Gulf of Mexico has yet to fully manifest its impact. Consider then the high pressure of oil fields under the ocean floor and the impact on the Earth if that ocean floor becomes disturbed and releases those reserves, those deposits. Far more devastation than one spill.

Humanity has much to learn of the Earth and its care. Resources are not fixed or eternal. And many realities around the Earth are interactive and have tipping points. When searching for other worlds of life, humanity is discovering that its own world is not that common and the need to take care of it and maintain its balance.

Things to come

July 3, 2013

JANU: The Earth will become, in time, an interplanetary junction for commerce, technology, culture, medical expertise, and pleasure. The genius that will accumulate here far outweighs the disturbances of transition and accommodation. There will be technologies that will help ensure the planet's stability, the introduction of resources

created through technologies that do not exist today on the Earth. Solar energy will become, in the not too distant future, a dominant focus for resource. Solar radiation will be harnessed as an energy source through conversion. And subtle energy realities will provide virtually unlimited energy resource. The challenges to this are obvious, with the large financial resources of the oil industry protecting their investments. But this will change, fall away, for the other resources will become far more economical.

Life on the Earth, culturally speaking, will go through many changes. The current conflicts will give way to more profitable activity through peaceful cooperation. Slowly, at first, more and more, the public will become entrepreneurial and more difficult to manipulate for the profit of large corporations. They will continue to exist for their combined resources allow for more costly enterprises.

Food supplies will move away from forced agriculture, stressing the planet's ability to produce and plants to survive. Genetic manipulation will continue, but the question of nutritional value will linger. There will, in time, be the introduction of agricultural vegetation from other worlds, some of which will be very conducive to food production. And, slowly, commercial foods will improve in natural nutrition.

Ultimately, population will be controlled, out of necessity, with public cooperation. The natural limitations of most species will be recognized as purposeful but more intelligent and sensitive methods will be adopted for humanity, with the purpose of the same. Yes, humanity becomes exposed to contact with other worlds. Virtually every element of culture or society—art, music, science, technology—will change. After some near disasters, humanity's relationship with the Earth's oceans and land and atmosphere will improve. Models for population density and resource utilization will be adopted. Other discoveries are yet to come and will be discussed.

Many changes to come

Aug. 23, 2013

JANU: The destiny of the Earth includes many new adventures, many changes, many new understandings, and many improved relationships amongst humanity, not only with each other but the rest of the Earth as well: all creatures, Earth's systems of life support.

The oceans will become farming communities, not just on the sea floor but suspended, for the sea will be yielding new kinds of crops, not only for food but medicinal as well. Whole new adventures in farming and cultivation will ensue. The Earth will have zero gravity farms as well, initially in Earth orbit and, as technology improves, suspended in the atmosphere with hovering craft or constructions, if you will. There will be those attempts to produce artificial foods, requiring no farms, for human consumption, but initially this will prove unsuccessful as the knowledge for life-containing foods, living foods grows. Experimenting with inoculations of nutrition will prove unsuccessful as well, for the body needs more than chemistry for health.

Humanity will grow hypersensitive to solar energy for a time and withdraw from exposure to the sun. This will bring about a technology and culture with many changes. Earth will move into crisis for survival of the planet as a result of humanity's lack of sensitivity to its needs. This will bring awakening out of necessity for survival on this world. Humanity has yet to learn to anticipate the need for change without being forced into it, you see, by its actions, behavior.

Earth does not exist, our brother, strictly for the needs of humanity. There are many other life systems the Earth supports that make their contribution to life. All systems, in one way or another, support each other. Humanity is slowly learning this. Now, natural disasters as currently being experienced is a human perspective of natural change, evolution, and response to conditions not fully understood by humanity. Crisis motivation will be replaced by a growing sensitivity and consciousness that perceives change in its infancy, with greater forecasting ability to anticipate response. The advent of cultures from other worlds will assist in these changes, for many other worlds have much to offer in technology and ability. So, as you can see, our brother, humanity's future is full of adventure, discovery, change, and reward through embracing more of life that already exists. We look forward to these changes, our brother, and to assist as we may. Namaste.

Human destiny, Earth destiny, and reaching for the stars (Service) Sept. 26, 2013 B

JANU: Service, then this evening, reaches into three areas. Area #1 has to do with human consciousness. Area #2 has to do with the destiny of the Earth, and Area #3 has to do with humanity's journey to the stars.

Human consciousness rails against what humanity has created. It desires greater freedom through awakening. It's aware of its potential and the unlimited possibilities of life but has challenges getting humanity's personality and ego to let go of obsessive relationships with the mundane.

The destiny of the Earth, on the other hand, functions differently, for its destiny is different, but it understands what humanity has created and the struggle that has been created for the Earth as a result. The Earth tolerates and accommodates much of the human destructive patterns, but they are causing the Earth to consider somewhat more drastic means.

The journey of humanity to the stars will in time be facilitated by the beginnings of contact with the larger human family, especially those who are aware of the technology needed for humanity's early attempts. Humanity needs educating to the reality of balanced and harmonious involvement and this has begun in some circles, some individuals and some groupings. Our journeys reflect this. We are looking less for a few to lead but for more of the masses to awaken to their own creativity and capacity for genius and a love for life. Along with this will come a vision for their future that will pale their obsessions with the mundane. Humanity has a blessed future but unaware of it.

A purpose for the Earth and humanity

Oct. 14, 2013

JANU: Journeying with us then this morning are those who have served the destiny of the Earth since before its formation. For there existed, our brother, before the Earth, a need for a continuation of the human journey with a world in addition to those already existing and in formation. For the Earth humanity is an additional element to a destiny for humanity collectively, of other worlds as well. So the destiny of the Earth includes this and humanity has a role to play. And continuing guidance and inspiration is needed.

Now, the awakening of humanity we speak of includes awakening to this larger view of life; therefore, once more, the imperative for the awakening of humanity which we serve, as before, when humanity considered the Earth a flat environment with edges to

fall off and moved to a global reality. It is time for humanity to move to a universal reality. Let there be, then, a commitment to an understanding that humanity and the Earth have a role to play together and that the Earth is no longer just a lump of clay to be molded to the whims of humanity, but a viable living reality with a consciousness and a purpose and a life.

Humanity's move to being open to the existence of other worlds and relationships with these is only a beginning, our brother. Many more thresholds beyond this. Not to mention the move from third dimensional physicality into an energetic existence, much freer to explore and expand and contribute to life. A future with much wisdom and maturity to properly utilize the ability to create instantly through thought. This already exists in your world, our brother, with a few, but the wisdom and the maturity are still unfolding.

Of course, the Earth's destiny is influenced by the Solar System, and vice versa. Every part of life, our brother, has a destiny and purpose. Humanity will awaken to the reality that it is but a part of a larger life, inter-dependent, co-dependent, and one with. Humanity desires to secure its future. How can this be, by denying the larger life, its truth, and its presence? Which includes humanity.

Step into the future

Feb. 8, 2014

JANU: I am Janu speaking, waiting then with you for the outcome of a projection into the future of humanity. What you see here are the beginnings of an etheric-like formation of human potential. The humanity of the future will leave behind much of what it is consumed with at this time: power, survival, influence, destructiveness, pride, false pride, emotional chaos, and consciousness traveling in circles repeating old patterns again and again.

We see in these new formations humanity less identified with physical species, but more identified with universal mind and connection with more of life than physicality, you see. We see humanity discovering the power of peace, not meaning just the lack of violence, but the peace that moves with life, fulfilling opportunity, working closely with other worlds, other species, and other realities, a sense of teamwork, community, and mutual benefit. Survival in the physical being less of a focus. Survival as a consciousness, as a spirit, being a new identity, more connected with life and the freedom to be. A vision of the future that draws humanity's consciousness in its direction.

The perception that the future is somehow separate from reality of the moment is a limited view, for in very real ways humanity is already its future. Potential is real, our brother. It is built into life, in the spiritual DNA, if you will, of the human journey. It is happening, even as we speak. Step into the future, then, our brother. It is here.
